WHAT BOOYA IS

A screen recorder that knows where to look.

Booya records your screen, writes captions on your own machine and zooms in when your clicks bunch up. It is free, open source and built with Tauri, so it stays small and fast.

The brand should feel like the app: calm, quick, a little bit funny, and out of the way until you need it.

1

Plain first

Ink on paper. One accent. If something needs a second colour, it probably needs fewer words instead.

2

On purpose

Nothing moves, blinks or glows unless it tells you something. The ripple means a click. The orange means recording.

3

Precise, not cold

Tight type, exact pixels, tidy spacing. The ghost is the one wink, and we only wink once.

4

Yours

Offline by default. We say what stays on your machine and we never make it sound like magic.

THE BACKSTORY

The forgotten arrow.

For years Booya was the cursor nobody looked at. It pointed, it clicked, it got cropped out of every demo. So it died a little, came back as a ghost, and now it haunts your cursor on purpose.

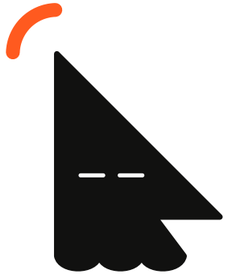

It zooms only when three clicks cluster. One click is a click. Three close together means you are showing something.

It blinks when recording starts and stops. Never in between. That is how you know it heard you.

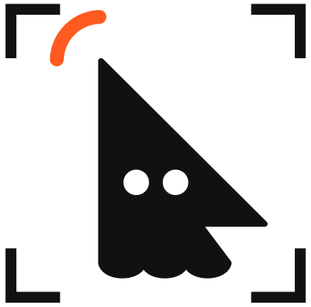

It writes captions offline. It listens, it types, and nothing leaves your machine.

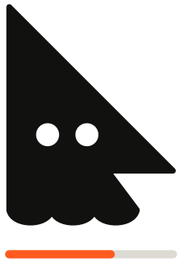

Idle
Default. Empty states, docs.

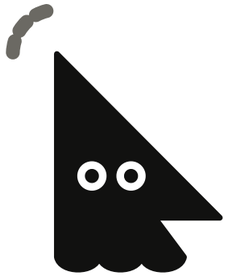

Blinking
Record start and stop only.

Zooming
Auto zoom, tutorials.

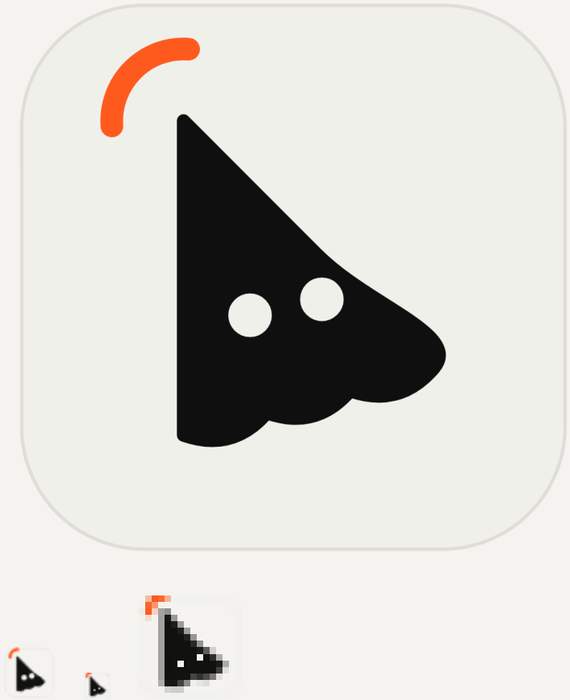

Saving
Exporting, writing captions.

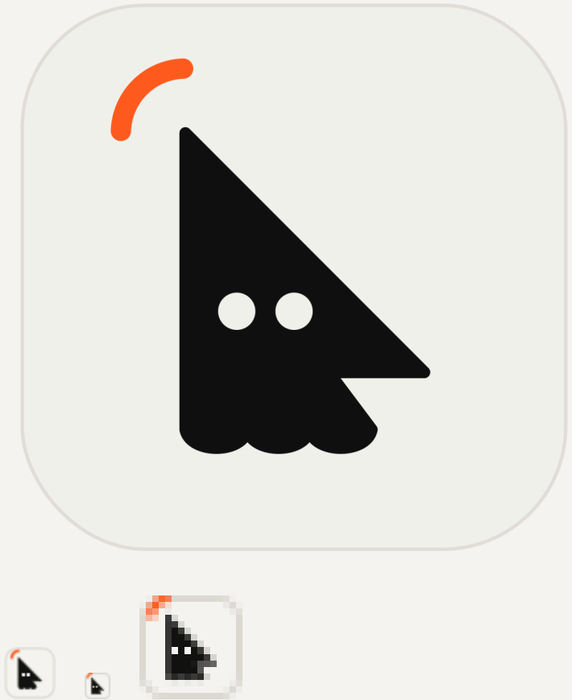

Error
Something failed. Stay calm.

Poses only change the eyes, the ripple and one small prop. No arms, no mouths, no sparkles, no blush. Files: assets/mascot, light and dark, SVG and PNG.

BEFORE · MOCKUP E

AFTER · V1.0

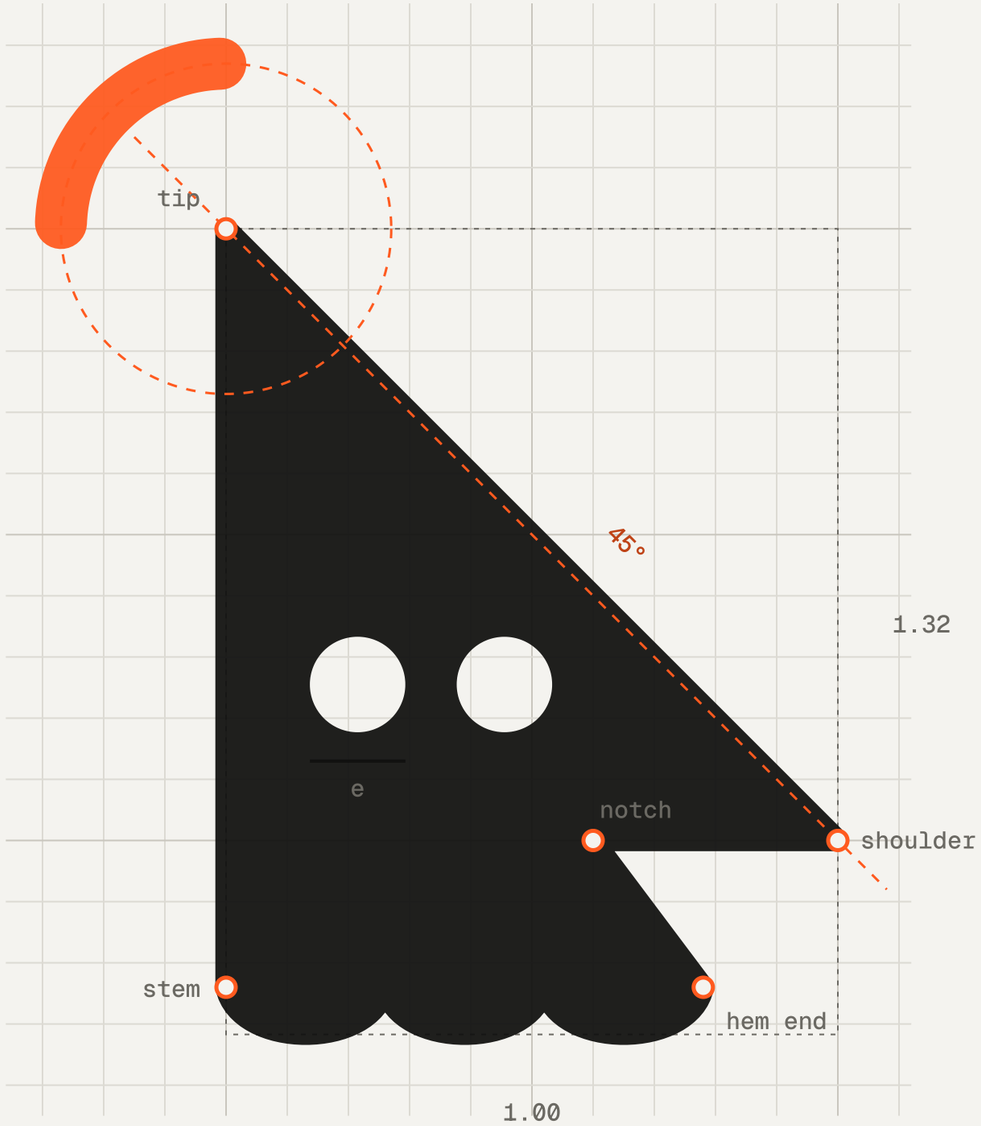

Pointer first. The swollen dome read like a party hat. Now it is a real arrow: straight stem, 45 degree edge, sharp tip.

A proper tail notch. The inner corner on the lower right is the detail everyone recognises from a real cursor.

Chunkier. 1 : 1.32 body, wider at the shoulder, so it holds up in the Dock and the tray.

Ghost second. Three soft scallops on the hem and two cut-out eyes up in the head.

Hand-tuned small sizes. At 32 and 16 px the eyes snap to whole pixels.

CONSTRUCTION

Built on the arrow.

Grid. The body is 1.00 wide and 1.32 tall, drawn on a 0.1 grid from the tip.

Edges. A straight stem on the left and a 45 degree edge from the tip to the shoulder.

Tail notch. At the shoulder line, the edge steps in to 0.60, then the tail runs down to the hem.

Hem. Three equal scallops, 0.26 wide, 0.077 deep.

Eyes. Two holes, diameter **e** = 0.156, centred 0.24 apart in the head. **e** is also the clear space unit.

Ripple. One quarter ring around the tip, radius 0.27, stroke 0.085, round caps. Always Signal, or mono.

Corners. A 0.035 round join softens the tip and shoulder without blunting them.

HORIZONTAL · PRIMARY

Mark body is 1.58 x the cap height. Gap is 0.42 x cap. The hem sits a hair under the baseline.

STACKED

For square spaces, splash screens and stickers. Body is 2.1 x cap.

MARK AND WORDMARK

The wordmark is Geist SemiBold, tracked -3.5%, outlined. Never retype it.

CLEAR SPACE

Keep at least one eye width **e** clear on every side, measured from the ripple, the stem and the hem. More is better.

MINIMUM SIZE

mark 16 px

lockup 88 px wide

Recording, ripple

USAGE RATIO ON A TYPICAL SCREEN

Signal stays under 10% of any screen, and usually under 3%. It is the record dot, the Stop button, the ripple and the focus frame while recording.

Recording state is always Signal. If something is orange, the user should be able to assume it is recording, or about the click.

No other accents. Status colours (next page) appear only inside messages, never as decoration.

SEMANTIC · LIGHT · DARK

Success
#1D7A45 · #4CC385

Warning
#975A00 · #F0B24E

Danger
#C2301F · #FF6B5B

Recording
#FF5A1F · #FF6A33

Focus ring
#111110 · #EDEBE5

Signal text
#BF4317 · #FF6A33

Signal on Paper fails for text at 2.81:1. Use **Signal text #BF4317** for orange words and links in light mode. Keep #FF5A1F for fills.

Buttons on Signal use Ink labels (6.06:1). White on Signal is 3.12:1 and is not allowed.

Aa

Geist

Interface, headings, docs. Weights 400, 550, 600.

Geist Mono

Timers, shortcuts, file sizes, labels.

Sentence case everywhere. Buttons too.

Tight headings, -2% to -3.5% tracking. Body stays at 0.

Numbers that change use tabular figures, so the timer never jitters.

Both fonts are SIL OFL 1.1. Files and licences are in fonts/.

RULES

20 px grid, 2 px padding, drawn at 1.5 px stroke.

Round caps and joins, 2 px corner radius on rectangles.

One colour, currentColor. Filled shapes only for state, like the record dot.

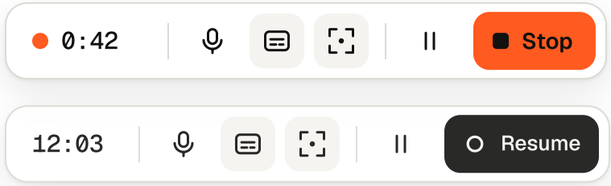

Plain metaphors. A mic is a mic. The zoom icon borrows the focus frame.

Sizes: 16, 20 and 24. Scale the stroke with the size, never below 1.25.

One window, a quiet sidebar and plain rows: label, one line of help, one control. No icons in rows, no Signal anywhere in settings.

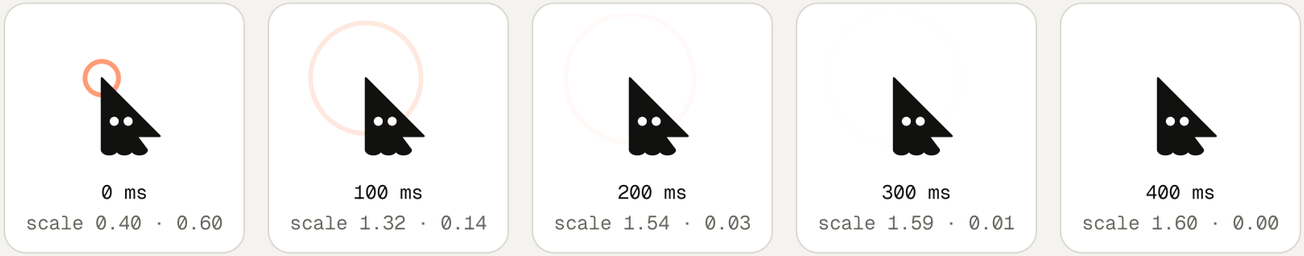

Caption overlay. Geist 500, 22/30, on Ink at 82%. Max two lines, 720 px wide, 26 px from the bottom. Same in light and dark, because it sits on the recording.

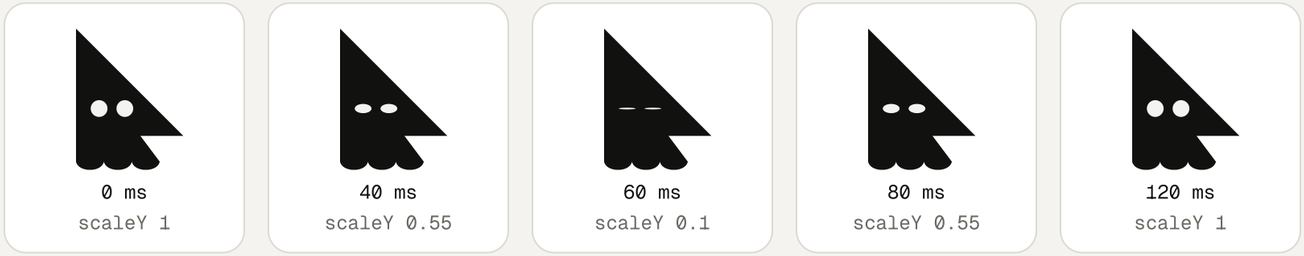

Focus frame. Four corners, 3 px, 26 px arms, 6 px outer radius, in Signal. It appears when three clicks cluster and eases in with the zoom.

Cursor. In recordings Booya can swap your pointer for the mark at 26 px, with a single ripple per click.

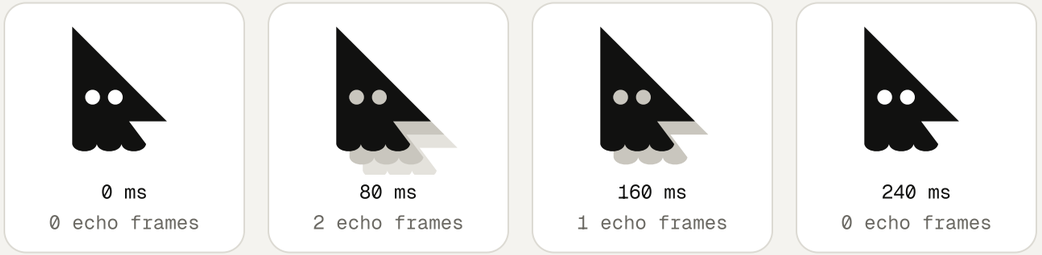

CLICK RIPPLE · ONE RING · 400 MS · CUBIC-BEZIER(0.2, 0.8, 0.2, 1)

BLINK · EYES SCALEY 1 TO 0.1 AND BACK · 120 MS · RECORD START AND STOP ONLY

OPTIONAL TRAIL · RECORD START ONLY · 240 MS · FLAT TINTS, NO BLUR

Ripple	400ms · scale 0.4 to 1.6 · opacity 0.6 to 0
Blink	120ms · scaleY 0.1 · start and stop
UI in	150 to 200ms · standard ease
UI out	150ms · cubic-bezier(0.4, 0, 1, 1)
Zoom	350ms in, 450ms out, standard ease
Trail	optional · 240ms · 2 echo frames on record start

REDUCED MOTION

No ripple scale. Show a static ring for 200 ms, then fade.

No blink, no trail. Zoom cuts instead of easing.

Transitions drop to opacity only, 100 ms or less.

```
.ripple {
  animation: by-ripple 400ms
    cubic-bezier(.2, .8, .2, 1) forwards;
}
@keyframes by-ripple {
  from { transform: scale(.4); opacity: .6 }
  to   { transform: scale(1.6); opacity: 0 }
}
@media (prefers-reduced-motion: reduce) {
  .ripple { animation: none }
}
```

TAGLINE

Record it. Booya.

Plain. Say what happened, then what to do.

Short. One idea per sentence. Most UI strings fit on one line.

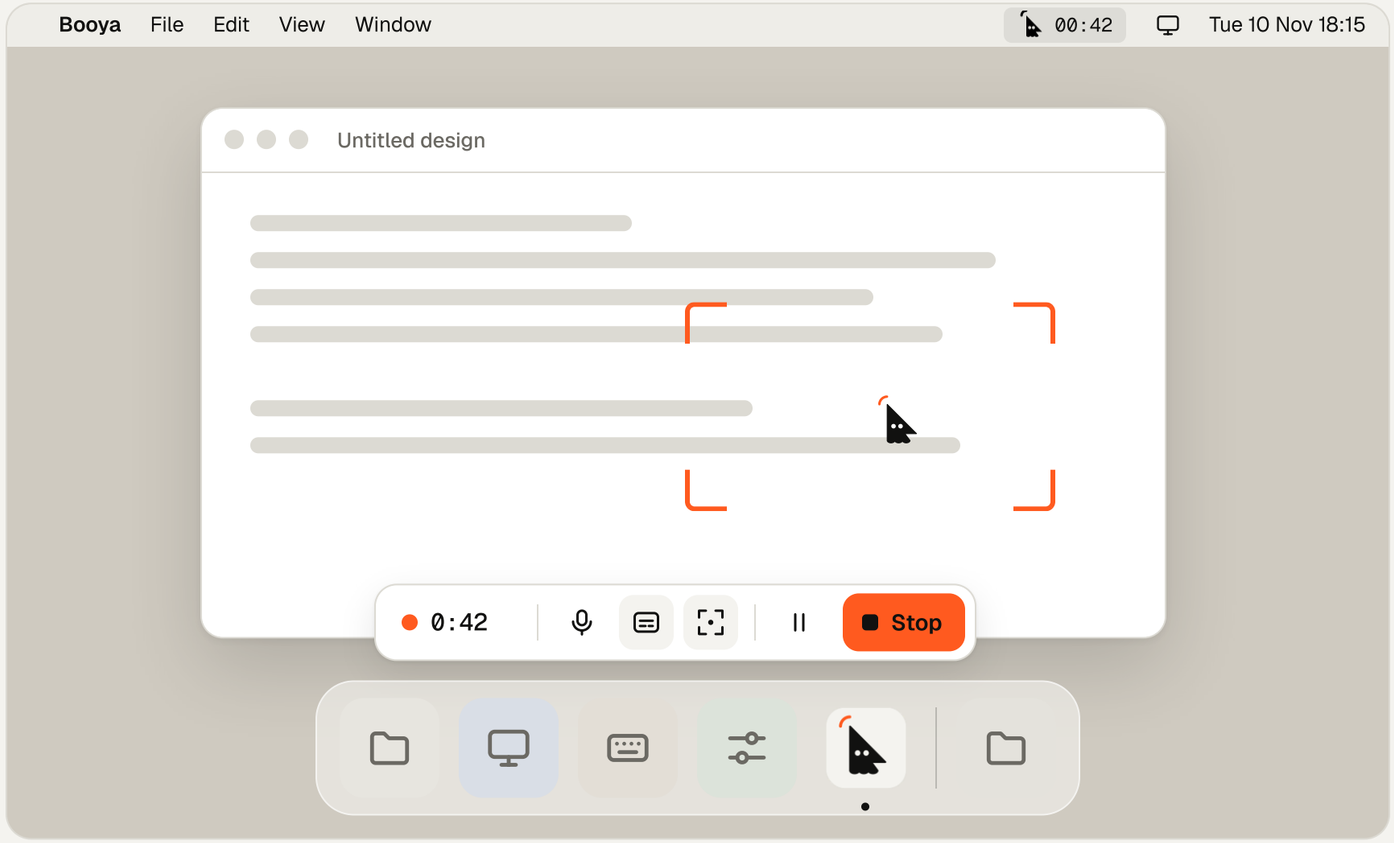

Friendly, a little playful. The ghost joke lives in the mascot and the docs, not in buttons.

Never cutesy. No spooky puns in errors, no baby talk.

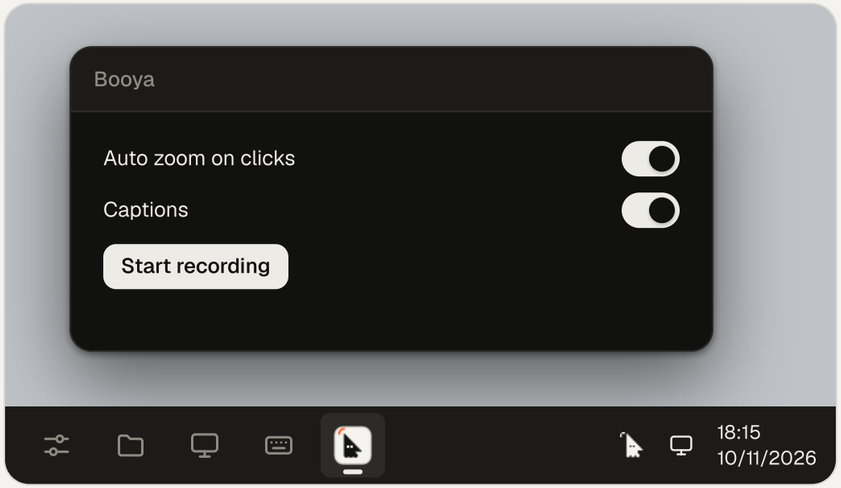

No hype. Skip revolutionary, magic, seamless, powerful, AI-powered.

No exclamation marks in the UI. Calm is the point.

MOMENT	WRITE	NOT
Start	Start recording	~~Let's go!~~
Stopped	Saved. 1 min 12 s, 48 MB.	~~Awesome! Your video is ready!!~~
Captions	Captions are ready. Written on this device.	~~AI-powered captions generated by our magic engine~~
Auto zoom	Zooms in when three clicks land close together.	~~Revolutionary smart zoom technology~~
Error	Couldn't reach the mic. Check System Settings, then try again.	~~Oops! Something went wrong :(~~
Empty	Nothing here yet. Press Alt Shift R to record.	~~Boo! No videos found, spooky!~~
Delete	Delete this recording? This can't be undone.	~~Are you sure you want to permanently delete???~~

macOS: Apple grid icon in the Dock, template glyph in the menu bar with the timer while recording.

Windows: 24 px icon in the taskbar, pixel-drawn 16 px tray glyph in paper on the dark taskbar.

Idle and recording. Recording adds the ripple, nothing else changes.
